

Problem

- Database user management is not compliant
- User permissions hide true user access (over-privilege)
- Multi-cloud databases cannot integrate to a single Enterprise IAM directory (Kerberos, LDAP, SAML)

Heimdall Database PAM & PASM

- Industry leading granular user audit reports
- Centralizes database authentication/authorization to your directory / IAM solution
- Self-service access to databases based on LDAP group membership

Benefit

- Simplify user management for ALL your databases (cloud or on-premise)
- Achieve database access visibility of AI agents, applications and all users
- Fulfill regulatory compliance (**SOX, ISO/IEC 27001, SOC 2, GDPR, CMMC v2, FINRA**)
